Individual Contribution Report

Student Name: John Rence Arenga

Group: Shared Braincells

Assigned Role: Leader

What did I contribute to the project?

I am the group leader. I assign tasks to each of my members.

Once the members finished their respected task, I collect

everything to compile and organize it, and push to my repository.

What features did I personally develop?

I did not directly build any features, but I helped organizing

the tasks of my teammates as well as parts of their codes to

ensure that we are all working on the same tasks so no time

will be wasted.

What problems did I encounter?

One of the main challenges I faced was a lack of time;

since it was finals season, I had many deadlines to meet.

didn’t really struggle much on building this OS it was

just simply that our time was extremely limited.

How did I solve those problems?

I solved this problem by managing my limited time and organizing tasks of my members, so that we could finish everything on time.

What did I learn from this project?

Through this activity, I have learned to be organized and responsible in every mistake, because as a leader, I am also held accountable for the mistakes of my members.

Evidence of my contribution:
