Individual Contribution Report

Student Name: Kent Cedric C. Pacios

Group: Shared Brain Cell

Assigned Role: User and System Developer

What did I contribute to the project?

I contributed the file name users.py and the other is the login system, whoami, and the systeminfo.

What features did I personally develop?

I personally built the whoami and systeminfo commands and interface.

What problems did I encounter?

I sometimes encounter that the systeminfo and whoami won’t appear when it is called.

How did I solve those problems?

I checked it more carefully and found those problems.

What did I learn from this project?

I learned how the simple Os works, even though it wasn't a real Os.

Evidence of my contribution:

Kent Cedric Pacios, User and System Developer

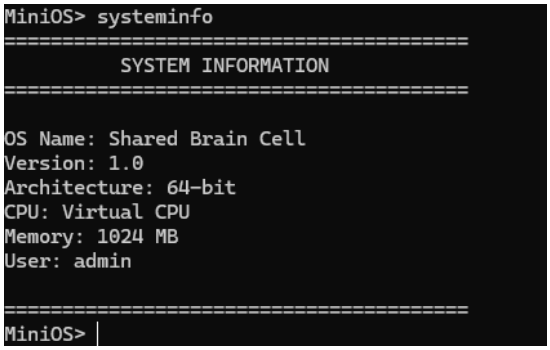

- Built users.py and the login system
- Built the whoami and systeminfo commands
- Built the error handling
- Tested every command and helped write the documentation

```
import getpass

USERS = {
    "admin": "admin123",
    "student": "student123",
}

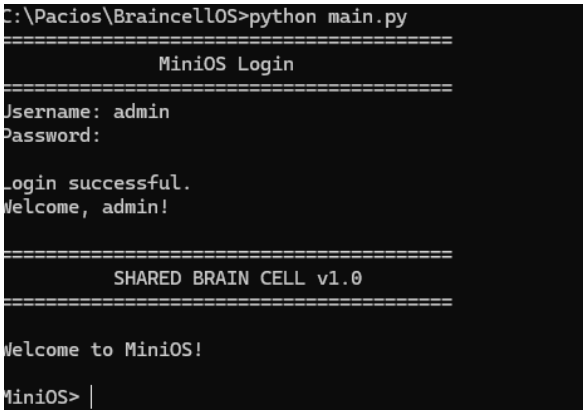

def login():
    print("=" * 40)
    print("              MiniOS Login")
    print("=" * 40)
    for _ in range(3):
        username = input("Username: ").strip()
        try:
            password = getpass.getpass("Password: ")
        except Exception:
            password = input("Password: ")
        if USERS.get(username) == password:
            print("\nLogin successful.")
            print(f"Welcome, {username}!\n")
            return username
        print("Error: Wrong username or password.\n")
    print("Too many failed attempts.")
    return None
```

```
